PHYSIOLOGICAL EFFECTS OF ZEOLITE AND ORGANIC FERTILIZERS ON ACHILLEA

LAP Lambert Academic Publishing. Taschenbuch. Book Condition: Neu. 220x150x mm. This item is printed on demand - Print on Demand Neuware - Present research, which carried out at new reclaimed land of desert, Egypt, during two consecutive seasons (2006/2007 and 2007/2008) to scrutinize the effect of zeolite, compost, humic acids and biofertilizers (*Azotobacter chroococcum* and *Bacillus megaterium*) whether alone or in combinations on growth characteristics, oil yield and its components and chemical composition of Yarrow plants (*Achillea millefolium*) herb, in comparison with recommended dose of NPK as (control). The findings undoubtedly specify the importance of zeolite which has a unique role in soil physical and chemical properties. Hence its combination with compost, biofertilizers and humic acids could replace the application of mineral fertilizers in production of Yarrow plant and varieties of other crops consequently minimize the total costs and pollution of the agricultural environment particularly in new reclaimed lands. 300 pp. Englisch.
