Cuvillier Verlag Sep 2008, 2008. Taschenbuch. Book Condition: Neu. 209x147x14 mm. Neuware - Humans have exploited forests for thousands of years as they seek to use forest species asresources for food, fuel and timber, or to clear forested land for agricultural and urban purposes.In modern times, forests exposed to intensive human disturbance are the species-rich tropicalforest ecosystems. For instance, Nigeria has the world's highest deforestation rate of primaryforests. Between 2000 and 2005, 55.7 percent of primary forests in the country, defined asforests with no visible signs of past or present human activities, were lost as a result of humanactivities such as logging, subsistence agriculture, and the collection of fuelwood. Since geneticdiversity within species is crucial for their long-term survival, conservation of genetic diversityin tree species should be given high priority. For effective conservation of genetic diversity intree species in a country where prevalent human activities are shrinking its forests, effects ofhuman activities on genetic diversity in tree species need to be analysed.This dissertation aims at analysing and comparing effects of human impacts on genetic diversityin *Mansionia altissima* A. Chev. and *Triplochiton scleroxylon* K. Schum. *Mansionia altissima* and *Triplochiton scleroxylon* are important West African timber tree species of family Sterculiaceaewith contrasting successional status. *Mansionia altissima* is a non-pioneer light demanding treespecies, characteristically more abundant in closed forests, whereas *Triplochiton scleroxylon* is apioneer species predominant in open forests. Since human disturbances tend to have oppositeimpacts on the regeneration potential of these two species, also different effects on geneticdiversity levels were expected. Fresh leaves of adult trees and saplings of both species werecollected from the same plots in Akure Forest Reserve, Nigeria namely: an isolated forest patch,a logged forest and a primary forest with no visible signs of past or present human activities.Additionally, samples were collected from a plantation for *M. altissima* and a...
