# Mathematical Modeling: Problems, Methods, Applications (Hardback)

Filesize: 9.01 MB

Reviews

This is actually the finest ebook i have got study till now. I actually have go through and that i am sure that i am going to likely to read once again once again later on. Its been developed in an extremely straightforward way and is particularly simply soon after i finished reading through this ebook through which actually modified me, change the way i really believe.
(Mrs. Maybelle O'Conner)

MATHEMATICAL MODELING: PROBLEMS, METHODS, APPLICATIONS (HARDBACK)

To save **Mathematical Modeling: Problems, Methods, Applications (Hardback)** PDF, make sure you follow the web link under and save the ebook or have access to additional information which might be related to MATHEMATICAL MODELING: PROBLEMS, METHODS, APPLICATIONS (HARDBACK) book.

Springer Science+Business Media, United States, 2001. Hardback. Book Condition: New. 2001 ed.. 259 x 171 mm. Language: English . Brand New Book. This volume contains review articles and original results obtained in various fields of modern science using mathematical simulation methods. The basis of the articles are the plenary and some section reports that were made and discussed at the Fourth International Mathematical Simulation Conference, held in Moscow on June 27 through July 1, 2000. The conference was devoted to the following scientific areas: * mathematical and computer discrete systems models; * non-linear excitation in condensed media; * complex systems evolution; * mathematical models in economics; * non-equilibrium processes kinematics; * dynamics and structure of the molecular and biomolecular systems; * mathematical transfer models in non-linear systems; * numerical simulation and algorithms; * turbulence and determined chaos; * chemical physics of polymer. This conference was supported by the Russian Ministry of Education, Russian foundation for Basic Research and Federal Program Integration . This volume contains the following sections: 1. models of non-linear phenomena in physics; 2. numerical methods and computer simulations; 3. mathematical computer models of discrete systems; 4. mathematical models in economics; 5. non-linear models in chemical physics and physical chemistry; 6. mathematical models of transport processes in complex systems. In Sections One and Five a number of fundamental and sufficiently general problems, concerning real physical and physical-chemical systems simulation, is discussed.
