By Laurence R. Tancredi

CAMBRIDGE UNIVERSITY PRESS, United Kingdom, 2005.

Hardback. Book Condition: New. 230 x 158 mm. Language:

English . Brand New Book. This book explores the impact of

neuroscience research over the past 20 or more years on brain

function as it affects moral decisions. Findings show that the

mind and brain are very close, if not the same, and that the

brain makes the mind. This is bringing about a change of focus

from examining mental activity (mentalism) to the physical

activity of the brain (physicalism) to understand thinking and

behavior. We are discovering that the physical features of the

brain play the major role in shaping our thoughts and emotions,

including the way we deal with moral issues. This book sets out

the historical framework of the transition from mentalism to

physicalism , shows how the physical brain works in moral

decisions and then examines three broad areas of moral

decision-making - the brain in bad acts, the brain in decisions

involving sexual relations, and the brain in money decision-

making.
